Overview

Small lodging establishments including hotels, inns, and bed & breakfast businesses across the United States (U.S.) have been heavily affected by the COVID-19 pandemic. Most, if not all, were deemed “non-essential” in the U.S. by state and federal governments, resulting in employers halting operations and closing workplaces. Currently, many states are in the process of trying to re-open parts of their economies which includes some non-essential businesses. If small lodging establishments have shared spaces for dining, entertainment, leisure, they are prone to crowding; therefore, they should approach reopening with a heightened level of caution.

Small lodging establishments include but are not limited to:

- Small hotels (boutique, historic)
- Inns
- Bed & Breakfast; AirBnB, HomeAway, VRBO, etc.
- Cabins
- Hostels
- Vacation Rentals

With stay-at-home and shelter-in-place restrictions beginning to lift, owners and managers of hotels, lodges and inns are challenged with difficult questions pertaining to preparing the premises in order to reduce the risk of COVID-19 transmission, such as:

- What measures can we enact to protect the health of employees, guests, visitors, and vendors?
- What communication do we need to keep everyone informed of the preventive steps being taken to keep everyone safe?
- What training do we need for employees?
- What limitations do we need to implement for both employees, guests, visitors, and vendors?
- How do we handle crowd management throughout the venue, including peak times?
- What precautions should we take regarding high touch interactive surfaces (e.g., counters, restrooms, common areas, doorknobs, etc.)?
- How can we ensure potential guests who are sick or have been in contact with someone COVID-19 do not stay at our facility?
- How do we effectively and safely turn over rooms?
- How do we keep common areas set up for safe physical distancing?

This document offers practical guidance for owner/manager and employee led actions in a small lodging/accommodation facility. It aims to address the key questions above by providing tips for 1) facility preparation, 2) operating procedures and 3) employee readiness.

What should an Innkeeper or Hotelier do to protect themselves, their employees, guests, visitors, and vendors?

Owners/Managers should continually monitor global (World Health Organization - WHO), federal (CDC, OSHA), state, and local guidelines for changes in recommendations, disinfection strategies, worker protections and other best management practices.

Owners/Managers should also consider developing a team of knowledgeable staff to monitor, assess, and implement new strategies as they become available. In addition, they should consider the following strategies for reducing the risk of COVID-19 transmission in regards to physical distancing, ventilation, enhanced cleaning practices, restrooms, gathering areas and contact surfaces, personal hygiene, employee wellness, personal protective equipment.
Preparing the Facility for Reopening

Common Areas: Lobby, Front Desk, Concierge Desk, Shared Spaces, and Parking Services

- Common areas (e.g., lobby, check-in desk, security check-in, shared kitchens/beverage areas, restaurant/dining) should be cleaned and disinfected on a daily basis at minimum.
- Regulate the use of common areas with clear signage (including maximum occupancy) and physical distancing measures in accordance with public health rules and guidelines.
- Limit the number of guests in a common area or shared space including visitors of the guests.
- Place marks on floor wherever a line may develop to assure proper physical distancing.
- Require face covering to be worn while addressing guests and visitors.
- Provide and require staff to use hand sanitizer and cleaning supplies for touched surfaces before/after each guest has been accommodated.
- If physical distancing is not possible for front desk personnel or other staff, then partitions should be considered between staff/desks and the public.
- Disinfect all surfaces and commonly touched equipment (e.g., check-in tablets) every hour.
- Consider eliminating shared common areas for snacks, beverages (e.g., water, coffee).
- Streamline credit card processing and all transactions with guests whenever possible to limit contact.
- Remove all paper vouchers, tickets, brochures, etc. from common areas such as lobby, front desk, etc.
- Ensure Guest Arrival Document is completed at the beginning of each check-in process.
- If a guest is sick or has been around someone who is positive for COVID-19 notify management, discontinue the service and ask the guest to wait outside or in an isolated area until management can address the issue.
- Disinfect all accommodation keys returned by guests. Do not return keys to another department.

Lobby and Other Public Restrooms

- Restroom doors and stall doors should be opened and closed without touching handles, if at all possible.
- Place signs indicating that toilet lids (if present) should be closed before flushing.
- Place signs asking employees, guests, visitors, and vendors to wash hands before and after using the restroom.
- Provide paper towels in restrooms and disconnect or tape-off hand air dryers.
- Common restrooms should be cleaned and disinfected frequently during the day and at closing.
- Clean and disinfect all HVAC intakes and returns daily.
- Optimize the ventilation system in restrooms, including maximize fresh air, ensure restroom is under negative pressure and proper filtration is being used.

Housekeeping & Maintenance

- Establish safe entry into a guest room, ensure no one is in the room upon entry, if possible.
- Establish enhanced cleaning practices using the appropriate disinfectants regarding safety and effectiveness. The U.S. Environmental Protection Agency (EPA) has developed a list of products that meet EPA’s criteria for use against SARS-CoV-2.
Reopening: Guidance for Small Lodging Establishments

DISCLAIMER: These are meant to be general guidelines to help you re-open your establishment. Always follow local, state and federal laws and guidelines.

- Review product labels and Safety Data Sheets and follow manufacturer specifications. Incorporate new hazards into existing OSHA Hazard Communications Program.
- Consider consulting Occupational Health & Safety (OHS) Science Professionals or industrial hygiene experts if additional advice is needed. Find a qualified industrial hygiene and OHS professionals near you in our Consultants Listing.
- Establish a disinfection routine.
- Ensure disinfection protocols follow product instructions for application and contact time.
- All contact surfaces should be disinfected regularly.
- Consider developing a standard operating procedure, a checklist or audit system to consistently train on enhanced cleaning practices or to track when and how cleaning is conducted.
- Have process in place for minimizing exposure to waste (trash cans, sanitary bins, etc.).
- Have process in place for bedding, linen, towels that minimize employee exposure to used/contaminated textiles, including, but not limited to: minimizing the shaking of linens; placing soiled textiles in bags; removing soiled linens and loading washing machines; and proper laundering practices. Launder bedding in accordance with established guidelines. (e.g., see CDC Guidance for Cleaning and Disinfecting).
- Take precaution when cleaning or maintaining shower, sink, and toilet (i.e. avoid creating aerosols, close toilet seat before flushing and use disposable gloves).

What should an Employee do to protect themselves and the customers?

- Educate yourself with the facts of COVID-19 from credible sources.
- If you feel unwell or have any of the symptoms associated with COVID-19—stay home. If someone at home is sick, stay home.
- Self-monitor your body temperature in the morning.
- Understand the rules – no large gatherings.
- Maintain your face covering, clean or replace frequently and use it if you are not able to maintain a 6-foot distance.
- Maintain good hygiene practices (using disposal gloves when cleaning; washing hands with soap and water for 20 seconds or a hand sanitizer with at least 60% alcohol). For more information, refer to CDC Cleaning and Disinfection Guidelines.
- If you test positive for COVID-19:
  - Stay home and isolate yourself.
  - Contact your supervisor and report your results as soon as possible.
  - Notify those with whom you were commuting, had come into close contact, or were sharing tools or workspaces right away.
- Returning back to work, employee should at a minimum follow the most recent CDC guidelines. NOTE: Employer HR Policies, HIPAA guidelines, and other laws should be followed at all times.

Guest Communication and Expectation

- During the reservation process, advise potential guest what steps you are taking to assure their health and safety and the health and safety of your employees.
- Ask if they or anyone in their household has tested positive for COVID-19.
- Confirm with them that while on your premises they are expected to follow specific rules established to protect them, other guests and your employees from COVID-19.

Communications

Posters that are visible through the workspace for the general public and employees.

Stop the Spread of Germs

Help prevent the spread of respiratory diseases like COVID-19.

- Stay at least 6 feet (about 2 arms’ length) from other people.
- Cover your cough or sneeze with a tissue, then throw the tissue in the trash and wash your hands.
- When in public, wear a cloth face covering over your nose and mouth.
- Do not touch your eyes, nose, and mouth.
- Clean and disinfect frequently touched objects and surfaces.
- Stay home when you are sick, except to get medical care.
- Wash your hands often with soap and water for at least 20 seconds.

AIHA®

Founded in 1939, the American Industrial Hygiene Association® (AIHA®) is one of the largest international associations serving the needs of industrial/occupational hygiene professionals practicing in industry, government, labor, academic institutions, and independent organizations. For more information, visit www.AIHA.org

About Occupational Health and Safety Professionals

Occupational health and safety (OHS) professionals (also known as industrial hygienists) practice the science of anticipating, recognizing, evaluating, and controlling workplace conditions that may cause workers’ injury or illness. Through a continuous improvement cycle of planning, doing, checking and acting, OHS professionals make sure workplaces are healthy and safe.
