Returning to Work: Body Workers, including Physical and Occupational Therapy, Chiropractic, and Massage

Guidance Document
Overview
The practice of working on a body to improve flexibility, strength, recovery, vitality, endurance, and wellness involves close contact with patients/clients. Body work can improve overall health and function and can be beneficial in helping people increase the viability of their immune systems.

The Centers for Disease Control (CDC) has developed interim infection prevention and control guidance for patient settings during the COVID-19 pandemic. SARS-CoV-2, the virus that causes COVID-19, is thought to be spread primarily through aerosolized respiratory droplets at close range. Airborne transmission from exposure to very small droplets over long distances is unlikely. However, there is evidence that this mode of transmission is possible, particularly in crowded, indoor spaces. People may also become infected by touching contaminated surfaces. The virus has been shown to survive in aerosols for hours and on surfaces for days. Infection can occur through eyes, nose, and mouth exposures. There is also strong evidence that people can spread the virus while pre-symptomatic or asymptomatic.

There are currently no data available that specifically assess the risk of SARS-CoV-2 transmission during body work or to determine whether standard precautions adequately protect personnel when providing treatment. To date in the United States, clusters of healthcare workers positive for COVID-19 have been identified in in-patient acute care hospital settings and long-term care facilities, but not at outpatient, clinic, office, or spa therapy and treatment facilities. The Occupational Safety and Health Administration’s (OSHA’s) Guidance on Preparing Workplaces for COVID-19 places non-aerosol generating patient care in the medium exposure risk category depending on characteristics of patient and the treatment provided, as there is potential for exposure to known or suspected sources of the virus that causes COVID-19 during specific procedures. The exposure to suspected or known COVID-19 positive patients/clients may vary given the variety of locations where body work is being performed.

When practicing without Airborne Precautions, the risk of SARS-CoV-2 transmission when treating known or suspected COVID-19 patients in acute care settings can be high. Most professionals working on patients/clients in clinic, office, salon, spa, or home settings are not set up for providing care to patients/clients requiring Airborne Precautions. For example, most clinic settings do not have airborne infection isolation rooms or single-patient rooms, do not have a respiratory protection program, and do not routinely stock N95 respirators. Of note, surgical masks are fluid resistant and protect the patient/client from employee’s respiratory emissions. They are not considered personal protective equipment (PPE) to protect employees from viruses, however, they are part of standard precautions for patient protection.

What actions should management take?
Create a COVID-19 Workplace Health and Safety Plan
- Assign a qualified workplace coordinator to develop a SARS-CoV-2 exposure control plan. This will be different depending on whether work is being done in acute or long-term care or clinic/office/spa settings.
- Determine how you would operate with a reduced workforce and continue essential functions.
- Work closely with occupational and environmental health and safety (OEHS) and/or occupational medical professionals when possible. AIHA has a consultants list of such qualified professionals.
- If applicable, create and use labor-management health and safety working groups and include representatives of authorized unions.
Conduct worksite assessments to identify COVID-19 risks and prevention strategies.

- Although SARS-CoV-2 is not bloodborne, body workers may encounter a patient/client’s blood or other potentially infectious materials (OPIM). Therefore, it is important to keep a robust and up-to-date written Exposure Control Plan to include the requirements of the OSHA Bloodborne Pathogens Standard.

- In addition to work areas, identify other areas that may lead to close contact among employees and patients. For example, waiting rooms, break rooms, cafeterias, locker rooms, check-in areas, waiting rooms, and routes of entry and exit.

- Include employees in all job classifications including, for example: physical therapists, physical therapy assistants and students, occupational therapists, chiropractors, massage therapists, ultrasound technicians, receptionists, billing, benefits, and office managers.

- As part of these assessments, facilities should collaborate with local and/or state public health authorities, and occupational safety and health professionals in considering the appropriate role for screening or testing and workplace contact tracing of COVID-19 or SARS-CoV-2 positive employees in a worksite risk assessment, following available CDC guidance.

Follow standard types of hazard controls (“the hierarchy of controls”) when implementing worker infection prevention practices specific to facilities and include a combination of controls noted below.

Elimination of the hazard

- Employers should educate employees to recognize the symptoms of COVID-19 and provide instructions on what to do if they develop symptoms. At a minimum, any worker should immediately notify their supervisor, their health care provider, and the local health department, who will provide guidance on what actions need to be taken.

- Develop a plan for enhanced routine cleaning and disinfection.

Worker screening

- Health checks and reporting requirements of individuals infected with COVID-19 should be explained to employees prior to reopening and again once operations have resumed.

- Communicate to employees the importance of being vigilant when monitoring symptoms and staying in touch with their employer or manager if or when they start to feel sick.

- Revisit your leave or sick program to allow for time off and follow all HR Policies and HIPAA/other regulatory requirements.

- Conduct employee temperature screening and wellness checks before each shift. (NOTE: be sure to comply with OSHA’s Access to Employee Exposure Medical Records standard for confidentiality.)
  - Temperature screening methods can include manual (use non-contact infrared thermometers) or thermal camera meeting FDA recommendations. Additional screening information/guidance can be found on the CDC website.
  - Assign an employee to manage and conduct the temperature screenings while following CDC guidelines in the above link. If this is not possible, employees can self-check their own temperature.

- Screening should be done in a manner such that the privacy of employees is respected.

- Perform a visual inspection for other signs of illness (e.g., flushed cheeks, rapid or difficulty breathing without recent physical activity, fatigue, extreme fussiness, cough).

- Employees who have a fever of 100.4° F (38° C) or above, or other signs of illness should not be admitted to the facility.
Returning to Work: Body Workers, including Physical and Occupational Therapy, Chiropractic, and Massage

**DISCLAIMER:** These are meant to be general guidelines to help you re-open your establishment. Always follow local, state and federal laws and guidelines.

For larger practice settings, screening may require incrementally staggered employee start times.

Employers can consider incorporating a wellness questionnaire with questions such as:

- Have you, or a person you have been in close contact with, been diagnosed with COVID-19 within the last 14 days? (close contact is 6 feet or less for more than 10 minutes.)
- Have you experienced any cold or flu-like symptoms in the last 72 hours (to include fever, shortness of breath, cough, sore throat, difficulty breathing, nausea, vomiting, and diarrhea)?
- Have you traveled to an international or domestic “hot spot” in the last 14 days?
- There are a number of examples available for wellness questionnaires (see Resources below).

Require employees who have symptoms or signs (i.e., fever, cough, or shortness of breath) or who have a sick family member at home with COVID-19 to notify their supervisor and stay home.

Sick employees should follow the CDC-recommended steps. Employees should not return to work until the criteria to discontinue home isolation are met in consultation with healthcare providers and state and local health departments. Consider waiving requirements for medical documentation during the pandemic, as the CDC has advised people with mild illness NOT to go to the doctor’s office or emergency room.

If employee is sick or receives positive COVID-19 test results, results should be reported to employer. In the case of a positive COVID-19 test result, the employee must stay home until cleared for physical return to the workplace by their medical provider, following the CDC’s [Discontinuation of Isolation for Persons with COVID-19 Not in Healthcare Settings](https://www.cdc.gov/coronavirus/2019-ncov/hcp/discontinuation-isolation.html).

If an employee tests positive:

- Follow federal, state, and local recommendations for reporting and communicating cases, while remaining compliant with regulations and guidelines pertaining to protecting private health information such as confidentiality required by the Americans with Disabilities Act (ADA). See OSHA for guidance on reporting workplace exposures to COVID-19.
- Engage HR immediately and enforce all applicable HR rules and regulations.
- The employee shall be isolated to the area they are in currently and removed from the work site for a minimum of 14 days.
- Any individuals having “close contact” (within approximately 6 feet) with the sick employee up should also be isolated from the work site for 14 days; and all other employees should continue to follow physical distancing rules. Communicate and reinforce with employees, while maintaining PII and HIPAA requirements, that they may have been exposed and to closely monitor their health, temperature, and current symptoms as identified by the CDC. Contact tracing and sharing of employee information should be done under the guidance of Human Resources due to privacy requirements of HIPAA, ADA, and EEOC. See the CDC’s [Coronavirus Disease 2019 (COVID-19) General Business Frequently Asked Questions](https://www.cdc.gov/coronavirus/2019-ncov/worksafety/business-faq.html).
- Enhanced cleaning and disinfecting should be done immediately by trained personnel, who should wear appropriate face coverings and gloves, dispose of gloves after use, and wash hands and face when complete. Visibly dirty surfaces shall be cleaned using a detergent or soap and water PRIOR to disinfection.
- For disinfection, use only EPA-registered disinfectants on List-N.
- Discourage employees congregating in groups. Employees should practice maintaining a distance of 6 feet between each other.
Patient/Client screening

- Telephone screen all patients or clients for signs or symptoms of respiratory illness, fever (> 100.4°F), cough, shortness of breath and other symptoms listed by the CDC. For patients who report signs or symptoms, when possible, delay appointment until the patient/client has recovered from the respiratory infection.
- Consider implementing an in-office patient/client screening procedure, including temperature taking and a brief symptom survey.
- People with COVID-19 who have completed home isolation clearance and have been symptom-free for 72 hours can receive care/treatment. This is decided using two strategies: a non-test-based-strategy, and a test-based-strategy:
  - Non-test-based-strategy:
    - At least 3 days (72 hours) have passed since recovery (resolution of fever (< 100.4°F) without the use of fever-reducing medications and improvement in respiratory symptoms such as cough or shortness of breath) and at least 7 days have passed since symptoms first occurred.
  - Test-based-strategy:
    - Persons who have COVID-19 who have symptoms: Resolution of fever (< 100.4°F) without the use of fever-reducing medications and improvement in respiratory symptoms (e.g., cough, shortness of breath) and negative results of an FDA Emergency Use Authorized molecular assay for COVID-19 from at least two consecutive nasopharyngeal swab specimens collected ≥24 hours apart (total of two negative specimens).
    - Persons with laboratory-confirmed COVID-19 who have not had any symptoms: At least 7 days have passed since the date of the first positive COVID-19 diagnostic test and have had no subsequent illness.

Engineering controls

- Modify or adjust workstations, beds, machines, and equipment areas to minimize close contact (defined as 6 feet) of employees with other employees, patients, clients, or others when possible.
- Use methods to physically separate employees, patients, and clients in all areas of the facilities when possible, including areas such as break rooms, and entrance/exit areas.
  - Use visual cues (e.g., floor markings, signs) to encourage physical distancing.
  - Space chairs and beds at least 6 ft. apart in shared patient/client spaces. Use barriers (like screens), when possible.
  - Remove communal objects like reading magazines, remote controls, and toys from waiting rooms areas.
  - If used in a treatment area, cover keyboard of computer with disposable, flexible, clear barrier (e.g. plastic wrap) and change between patients/clients.
  - Consider providing pens to patients/clients who need to fill out paperwork, rather than reusing.

Cleaning/Disinfection/Sanitation

- Clean and disinfect the room and equipment according to the Guidelines for Disinfection and Sterilization in Healthcare Facilities-2008.
- Clean, disinfect, and/or discard instruments, supplies, or equipment in dedicated areas to reduce cross-transmission. If a dedicated processing area is not available, perform processing in room by a single employee.
  - If instruments, weights, bands, calipers, etc. are used by multiple employees – disinfect or sterilize them between shared use.
  - If pens are reused, disinfect them between each use. Do not share pens between personnel and patients.
• Conduct targeted and more frequent cleaning and disinfecting of high-touch surfaces of shared spaces (e.g., tables, beds, machines, equipment, chair arms, doorknobs, light switches, hangers, and anything else with which people come in contact).

• Clean and disinfect chairs and beds between each patient/client.

• Select appropriate disinfectants – consider effectiveness and safety.
  – The U.S. Environmental Protection Agency (EPA) has developed a list of products that meet EPA’s criteria for use against SARS-CoV-2.
  – Do not mix different EPA registered chemicals together. The combination could be toxic by inhalation. Be particularly careful when using any products containing ammonia, sodium hypochlorite (bleach), or hydrogen peroxide.
  – Review product labels and Safety Data Sheets (SDS) and follow manufacturer specifications for cleaning/disinfecting.
  – Be sure to follow the products’ instructions for use (IFUs) carefully to determine the product’s compatibility with the surface type and whether additional PPE is needed for those using them.
  – Consider consulting an Occupational and Environmental Health and Safety (OEHS) Science Professional or Industrial Hygiene expert if additional advice is needed. AIHA has a consultants list of such qualified professionals.

• Establish a disinfection routine.
  – Ensure disinfection protocols follow product instructions for application and contact time. All items should be allowed to dry thoroughly after cleaning.
  – Use disposable wipes or rags when available. If not available, ensure rags are maintained, handled, and cleaned per product instructions.

• Consider developing a standard operating procedure, a checklist, or audit system to consistently train employees on enhanced cleaning/disinfecting practices or to track when and how cleaning and disinfecting is conducted. Note that this may be a requirement in some states or local jurisdictions.

• Provide Safety Data Sheets (SDS) for cleaning and disinfection products and ensure employees are aware of the hazards of use. Incorporate new hazards into existing OSHA Hazard Communications Program.

• Employees should receive, at minimum, awareness training on cleaning and disinfection products used in the workplace following OSHA Hazard Communication Standards. For employees who will use cleaning and disinfecting products, training should also include proper use, PPE, disposal, and all precautionary measures.

• Single-use items and used disinfection materials can be treated as regular waste, following regular safety guidelines.

• Any reused cloth materials should be washed and dried on the highest temperature setting allowable for the fabric.

• Deeper cleaning and disinfecting protocols should be developed and implemented in cases where confirmed cases of COVID-19 are discovered. Refer to AIHA’s Workplace Cleaning for COVID-19.

Restrooms

• Post signage limiting restroom occupancy to allow for proper physical distancing and to remind employees and clients to wash hands before and after using the restroom.

• Minimize touchpoints entering and existing restrooms, if possible.

• If the door cannot be opened without touching the handle, provide paper towels and a trash can by the door so a paper towel can be used when touching the handle and then discarded.
Returning to Work: Body Workers, including Physical and Occupational Therapy, Chiropractic, and Massage

Guidance Document

DISCLAIMER: These are meant to be general guidelines to help you re-open your establishment. Always follow local, state and federal laws and guidelines.

– Consider controlling access to bathrooms with a key so disinfection measures can be better managed. If a key is used, consider disinfecting it after each use.

• Doors to multi-stall restrooms should be able to be opened and closed without touching handles if possible.

• Place signs indicating that toilet lids (if present) should be closed before and after flushing.

• Use no-touch faucets, towel dispensers, soap dispensers, and waste receptacles when possible.

• Hand soap should be readily available for use by occupants.

• Provide paper towels and air dryers in restrooms.

– The WHO and CDC currently state that hands can be dried using a paper towel or hand dryer.

– Due to current uncertainties surrounding the transmission of SARS-CoV-2, care should be taken when using a hand dryer or paper towel.

– The use of touch or push hand dryers is discouraged due to possible surface contamination. If hand dryers are used, consider touchless devices.

• Businesses and employers should work with HVAC professionals to ensure that bathrooms are well ventilated, and if filtration is used, that proper filtration practices are being followed.

• Increase frequency and efforts to keep bathrooms clean and properly disinfected and maintain a record of sanitary work practices.

Ventilation

• Provide natural ventilation by opening windows and doors whenever possible to increase air flow. If windows and doors cannot remain open, provide good indoor air quality by:

– Keeping HVAC system operational to maintain thermal comfort and maximize outdoor air based on system design.

– Maintaining the relative humidity at 40-60%.

– Limiting the use of portable pedestal or overhead ceiling

– Ensure that the proper filtration is being used for not only normal office use but also what is recommended to control SARS-CoV-2 transmission.

– Clean and disinfect all HVAC intakes and returns daily.

– If fans such as pedestal, desk or hard mounted fans are used, take steps to minimize air from fans blowing from one person directly to another.

• If you need assistance on HVAC issues, ask an HVAC professional and see the American Society of Heating, Refrigerating, and Air-Conditioning Engineers’ (ASHRAE) COVID-19 (Coronavirus) Preparedness Resources updates for more information.

– AIHA Occupational and Environmental Health and Safety (OEHS) Science Professionals and industrial hygienists are also well versed in general dilution ventilation. AIHA has a consultants list of such qualified professionals.

Administrative controls

• Minimize employees working in each treatment room throughout the day.

• Limit persons accompanying patients to the minimum necessary. Consider closing waiting areas – patients can remain outside or in their cars until they are either called or texted to come inside for their scheduled appointment. When patients do not arrive in personal vehicles, consider separating waiting room chairs as far apart as possible for the anticipated volume.

• Ask employees to consider the following if they commute to work using public transportation:

– Use other forms of transportation if possible.
Returning to Work: Body Workers, including Physical and Occupational Therapy, Chiropractic, and Massage

Guidance Document

– If taking public transportation, maintain physical distancing and wear a cloth or disposable face covering.
– Change commute time to less busy times if possible.
– Wash hands before and as soon as possible after their trip.
– Change into scrubs/work clothes.

• At minimum, employees should wash their hands after they have been in a public place, after touching their face covering, after blowing their nose, coughing, or sneezing, after using the restroom, after touching any common contact surfaces, and before eating. **Avoid touching eyes, nose, or mouth with unwashed hands.**

• Employees should wash hands with clean, running water, apply soap, lather and scrub for at least 20 seconds, then rinse. Dry hands using a clean paper towel or air dry. When soap and water can’t be used, use an alcohol-based hand sanitizer that contains at least 60% ethanol or 70% isopropyl alcohol. Any use of alcohol-based hand sanitizers should follow local and State guidelines.

• Ensure personnel practice strict adherence to hand hygiene:
  – Before and after contact with patients.
  – After contact with contaminated surfaces or equipment.
  – After removing PPE.

• Provide employees adequate time and access to soap, clean water, and single use paper towels for handwashing.

• Remind employees to wash their hands often with soap and water for at least 20 seconds. If soap and water are not available, they should use hand sanitizer with at least 60% alcohol.

• Post signs and reminders at entrances and in strategic places providing instruction on hand hygiene, respiratory hygiene, and cough etiquette. This should include signs with labels for non-English readers, as needed.

• Provide a hand sanitation area for patients, clients, visitors, and vendors upon entry into your facility, with appropriate signs posted to remind people to use it before entering the rest of the office. Stations should also be placed in convenient locations, such as at exits, near elevators, and restrooms. Touch-free hand sanitizer dispensers should be installed where possible.

• Use no-touch waste receptacles when possible.

• Remind employees to cover their mouth and nose with a tissue when they cough or sneeze and throw used tissues in the trash. If they don’t have a tissue, cough or sneeze into their elbow, not your hands. Immediately wash their hands after blowing your nose, coughing or sneezing. Learn more about **coughing and sneezing** etiquette.

• Eliminate handshaking.

• Remind employees that people may be able to spread SARS-CoV-2 even if they do not show symptoms. Consider all close interactions (within 6 feet) with employees, patients, clients, vendors, and others as a potential source of exposure.

• When not performing patient care, employees should wear a cloth or disposable face covering to cover their nose and mouth in all areas of the business.

  – Cloth face coverings are generally recommended as an addition to physical distancing. They are especially important for source control when physical distancing not possible or feasible based on working conditions. Additional information on cloth face coverings can be found on **CDC’s website**.

  – Ask all patients/clients to wear a cloth or disposable face covering except if access to the face is needed for treatment. Cloth or disposable face coverings may prevent people who do not know they have the virus from transmitting it to others.
Returning to Work: Body Workers, including Physical and Occupational Therapy, Chiropractic, and Massage

Guidance Document

DISCLAIMER: These are meant to be general guidelines to help you re-open your establishment. Always follow local, state and federal laws and guidelines.

- Cloth or disposable face coverings should (1) allow for breathing without restriction; (2) be kept as clean as feasible; and (3) be replaced when dirty.
- Employees should receive training on proper way to put on and take off items such as face coverings to minimize contamination, as well as training on methods to clean these items.
- Stress the importance of hand hygiene before and after handling all face coverings.

Personal Protective Equipment (PPE)

- Use the highest level of personal protective equipment (PPE) available for suspected or known COVID-19 positive patients:
  - Wear gloves, a gown, eye protection (i.e., goggles with side shields or a disposable/reusable face shield that covers the front and sides of the face), and an N95 respirator or higher-level respirator.
  NOTE: If an employer chooses to provide or the employee supplies their own N95 respirator, please fully consider all the potential OSHA requirements.
  - Disposable respirators should be removed and discarded after exiting the patient's room or care area. These patients/clients should be seen in separate rooms or areas and not with or near other patients/clients that are well.
  - Reusable eye protection must be cleaned and disinfected according to manufacturer's reprocessing instructions prior to re-use. Disposable eye protection should be discarded after use.
  - Change gown if it becomes soiled. Remove and discard the gown in a dedicated container for waste or linen before leaving the patient room or care area. Disposable gowns should be discarded after use. Cloth gowns should be laundered after each use.
  - If a respirator must be used because of findings from your hazard assessment, you must comply with regulatory requirements for a complete respiratory protection program in accordance with OSHA Respiratory Protection standard (29 CFR 1910.134). Healthcare Providers should be medically cleared and fit tested if using respirators with tight-fitting facepieces (e.g., a NIOSH-approved N95 respirator) and trained in the proper use of respirators, safe removal and disposal, and medical contraindications to respirator use.
  - If a disposable N95 respirator is not available, consider using an N99, N100, elastomeric reusable respirator, or a powered air purifying respirator. See the NIOSH guidelines.
  - If no respirator is available, follow OSHA Enforcement Guidance for Respiratory Protection and the N95 Shortage Due to the COVID-19 Pandemic and/or contact local OSHA Area Office
  - Face shields can serve as both PPE and source control.
  - If adequate PPE is not available, do not perform any care or treatment. Refer the patient to a facility that has the appropriate PPE.
  - Provide appropriate PPE training and education:
    - Use videos and in-person visual demonstrations of proper PPE donning and doffing procedures. (Maintain physical distancing during these demonstrations).
    - Emphasize that care must be taken when putting on and taking off PPE to ensure that the worker or the item does not become contaminated.
    - PPE should be: (1) disposed; or (2) properly disinfected and stored in a clean location when not in use.
    - PPE worn at the facility should not be taken home.
  - Stress hand hygiene before and after handling all PPE.
• If scrub uniforms and lab coats are worn, they should not be worn home after a shift. Encourage personnel to change into street clothes after a shift if possible.

Contingency and Crisis Planning
• Major distributors in the United States have reported shortages of PPE, especially surgical masks, and respirators. The anticipated timeline for return to routine levels of PPE is not yet known. CDC has developed a series of strategies or options to optimize supplies of PPE in healthcare settings when there is limited supply, and a burn rate calculator that provides information for healthcare facilities to plan and optimize the use of PPE for response to the COVID-19 pandemic. These policies are only intended to remain in effect during the time of the COVID-19 pandemic.

• During severe resource limitations, consider excluding personnel who may be at higher risk for severe illness from COVID-19, such as those of older age, those with chronic medical conditions, or those who may be pregnant, from performing care.

Potential Exposure Guidance
• Even when personnel screen patients for respiratory infections, they may treat a patient or client who is later confirmed to have COVID-19.

• Personnel should institute a policy to contact all patients 48 hours after receiving care. Personnel should ask patients/clients if they are exhibiting any signs or symptoms of COVID-19. If they report signs or symptoms of COVID-19, refer them to their medical provider for assessment and follow CDC’s Healthcare Personnel with Potential Exposure Guidance.

Take actions to create a healthy office for employees and your patients/clients
• Follow CDC Guidance for Building Water Systems to ensure the safety of the building water system and devices after a prolonged shutdown.

• Understand that some employees may be at higher risk for serious illness, such as older adults and those with serious underlying medical conditions. Consider minimizing face-to-face contact for these employees if possible. This could include those with administrative duties like billing, benefits, scheduling, etc.

• Encourage those who are sick or at greater risk to stay home. This includes:
  – People with underlying medical conditions.
  – People who live with elderly people or those who are at risk.
  – People with upper respiratory or flu-like symptoms or who live with someone with these clinical symptoms.

Provide worker infection prevention information and training for all employees and supervisors
• Communication/training should be easy to understand, in languages appropriate to preferred language(s) spoken or read by the employees and include accurate and timely information.

  – Emphasize use of images (infographics) that account for language differences.

• Topics including, but not limited to: signs and symptoms of infection, staying home when ill, physical distancing, PPE, hand hygiene practices, use of face coverings, and potential routes of transmission (and how to minimize them) at work, at home, and in community.

• Training should be reinforced by the use of signage (preferably infographics) placed in strategic locations that direct employees how and when to use face coverings, how to report signs and symptoms of infection, and remind them how to properly wash their hands.
Returning to Work: Body Workers, including Physical and Occupational Therapy, Chiropractic, and Massage

Guidance Document

- People with COVID-19, people who live with someone with COVID-19, or who have been exposed to someone with COVID-19.

- Implement and inform employees of supportive workplace policies:
  - Flexible sick leave policies consistent with public health guidance. Providing paid sick leave is an important way to encourage employees to stay home when sick.
  - Consider not requiring a positive COVID-19 test result or a healthcare provider’s note for employees who are sick to validate their illness in order to qualify for sick leave. If you do require a doctor’s note from your employees to verify that they are healthy and able to return to work, be aware that healthcare provider offices and medical facilities may be extremely busy and not able to provide such documentation in a timely manner. Get more information related to the Americans with Disabilities Act during the COVID-19 pandemic.
  - Flexibility to stay home to care for a sick family member.
  - Human resources policies consistent with public health guidance, and state and federal workplace laws. For more information on employer responsibilities, visit the Department of Labor’s and the Equal Employment Opportunity Commission’s websites.
  - Employee assistance program and community resources to help employees manage stress and receive support.
  - Encourage employees at increased risk for severe illness to request special accommodations to allow them to perform their job duties safely while also protecting sensitive employee health information.

- Post signs and reminders at entrances and in strategic places providing instruction on hand hygiene, respiratory hygiene, and cough etiquette. This should include signs with images for non-English readers, as needed.

What actions employees should take

- Employees should evaluate their health continuously; if they are sick, have a fever or symptoms, or someone at home is sick, then they should remain home. NOTE: Employer HR Policies, HIPAA guidelines and other laws should be followed at all times.

- Maintain good hygiene practices (washing hands with soap and water for at least 20 seconds or a hand sanitizer with at least 60% ethanol or 70% isopropyl alcohol). For more information, refer to CDC’s handwashing guidelines.

- If an employee tests positive for COVID-19:
  - Stay home and isolate until cleared for physical return to the workplace by your medical provider, following the CDC’s Discontinuation of Isolation for Persons with COVID-19 Not in Healthcare Settings.
  - Contact your supervisor and report your results as soon as possible.
  - Notify your supervisor about others in the workplace with whom you came into contact.

- Maintain cloth or disposable (or better if you have it) face covering, clean or replace frequently, and use at minimum when unable to maintain physical distancing of 6-feet.

- Depending on local requirements, in alignment with CDC recommendations, wear a cloth or disposable face covering whenever physical distancing cannot be maintained (indoors or outdoors). Ensure the face covering is properly maintained and cleaned. Additional information on cloth face coverings can be found on CDC’s website. (NOTE: Cloth or disposable face coverings primarily protect other people. A cloth or disposable face covering is not a substitute for physical distancing.)
With the exception of children less than two, and individuals who have difficulty breathing, are unconscious, or otherwise unable to remove a face covering without assistance, CDC recommends that all people wear a cloth or disposable face covering in public settings and when around people who don’t live in their household, especially when other physical distancing measures are difficult to maintain.

Non-medical cloth or disposable face coverings or cloth or disposable face coverings are NOT Personal Protective Equipment (PPE), but they do offer some protection to others and should be worn while near other people in common spaces or shared workspaces. They are not a substitute for physical distancing, engineering controls, cleaning and disinfecting, proper hygiene, or staying home while sick.

Remove cloth or disposable face coverings correctly and wash hands after handling or touching a used face covering.

Wash cloth face coverings after each use. Cloth face coverings can be included with regular laundry. Use regular laundry detergent and the warmest appropriate water setting for the cloth used to make the face covering. Use the highest heat setting and leave in the dryer until completely dry. If air drying, lay flat and allow to completely dry. If possible, place in direct sunlight.

Let your employer know if you have concerns about PPE that may be provided to you and that you are properly instructed on how to use it. The CDC has recommended sequences for donning and doffing PPE.

Cover your mouth and nose with a tissue when you cough or sneeze and throw used tissues in the trash. If you don’t have a tissue, cough or sneeze into your elbow, not your hands. Immediately wash your hands after blowing your nose, coughing or sneezing. Learn more about coughing and sneezing etiquette.

Worker Rights
AIHA believes that basic protections are worker rights, as well as an essential ingredient of occupational health and safety systems, and that employers must provide a safe and healthful work environment.

AIHA®

AIHA is the association for scientists and professionals committed to preserving and ensuring occupational and environmental health and safety (OEHS) in the workplace and community. Founded in 1939 as the American Industrial Hygiene Association® (AIHA®), we support our members with our expertise, networks, comprehensive education programs and other products and services that help them maintain the highest professional and competency standards. More than half of AIHA's nearly 8,500 members are Certified Industrial Hygienists (CIH), and many hold other professional designations. AIHA serves as a resource for those employed across the public and private sectors, as well as to the communities in which they work. For more information, visit AIHA.org.

About Occupational and Environmental Health and Safety Professionals

Occupational and environmental health and safety (OEHS) professionals (also known as industrial hygienists) practice the science of anticipating, recognizing, evaluating, controlling and confirming workplace conditions that may cause workers' injury or illness. Through a continuous improvement cycle of planning, doing, checking and acting, OEHS professionals make sure workplaces are healthy and safe.

• Get additional resources at AIHA's Coronavirus Outbreak Resource Center.
• Find a qualified industrial hygiene and OEHS professionals near you in our Consultants Listing.

Disclaimer

AIHA is not legally responsible and shall be held harmless from all claims, causes of action, and demands, whatsoever, any third party may incur on account of damage, loss or injury resulting from adhering to these guidelines.

These guidance documents were primarily developed for those smaller business that don't have readily available occupational health and safety resources, and designed to help business owners, employers, employees and consumers implement science-backed procedures for limiting the spread of the coronavirus. They are subject to any local, state, or federal directives, laws, or orders about operating a business and should only be used if they do not conflict with any such orders. These documents are subject to revision and shall be updated accordingly.

AIHA makes no representations or warranties of any kind concerning its Copyrighted Material, either express or implied, including without limitation any implied warranties of merchantability, title, infringement or fitness for a particular purpose. AIHA shall be indemnified, defended and held harmless by all third parties and their directors, officers, agents, employees and assigns, and anyone authorized by any of them, from and against any and all claims, liabilities, losses and damages, including reasonable attorneys' fees, caused by or arising wholly or in part from the use of the Copyrighted Material.
